Lesson 6 — A Plan for Tuesday

Part 11 of 12: Answer key and teacher notes

Level: B1 (sixth step)

About 10 minutes · this part carries a sheet

Listening: L1 — four students; they share one inverter, one battery, two laptops and a list · L2 — six to nine in the morning, and seven to eleven at night · L3 — he starts the big downloads · L4 — the generator in the building below failed at half past seven, and they lost three hours

Part A (MCQ): 1-B · 2-C · 3-D · 4-A · 5-B · 6-C · 7-D · 8-B · 9-C · 10-C

Why 7 is [D]: the sentence is about a plan being tested, and only the paragraph after [D] tests one — the Tuesday the generator failed. The paragraph after [A] is the schedule, after [B] is one person's method, after [C]** is the rules. None of those is a test of anything.

Why 8 is B**: the eleven files are there to explain what Yousef learned from them, and the next sentence is the lesson — he starts the big ones first now. The paragraph is not a complaint about the connection and not a criticism of him.

Why 9 is C**: the passage explains no machine, asks for nothing and compares nothing. It follows one week's list from Sunday to Sunday.

Why 10 is C, respectful: as in Lesson 5, watch what is chosen to be reported rather than what is said about it. The writer gives the rules without comment, lets Dalia have the last word, and records the one week the plan failed — including the detail that the rule saved the work. There is no brave and no sadly. The respect is in the care taken over the detail.

Part B (True/False):

1. F — It is a plan for the power: what to do while it is on, and what to do when it is off.
2. T
3. F — He starts the big files at six and leaves the small ones until the end.
4. T
5. F — The router comes first and the laptops second.
6. F — They had sent it to the cloud at seven, so they lost only the time.

Part C (Fill in the blanks): 1. schedule · 2. inverter · 3. queue · 4. deadline · 5. cloud · 6. spare · 7. priority (Extra words: bandwidth, generator)

2.4 A (Opposites): 1. in use · 2. upload · 3. keep back · 4. unplug · 5. what can wait

2.4 B (Odd one out): 1. deadline (the others make or hold electricity) · 2. spare (the others are things you do) · 3. socket (the others are about time or order)

Come back to (present perfect or past simple): 1. failed · 2. have not lost · 3. put · 4. has kept

3.6 A (going to or will, and why):

1. is going to die — the evidence is in front of you
2. will take / I'll take — decided at the moment of speaking
3. are going to plug in — decided on Sunday and written on the list
4. will come back — an opinion, with I think
5. is going to submit — planned for a week

3.6 B (future forms): 1. is going to rebuild · 2. Are … going to download (or Will … download) · 3. are not going to get · 4. will go / is going to go · 5. will not move

3.6 C (present perfect or past simple): 1. failed · 2. have not missed · 3. queued · 4. has written

Mini-quiz: 1. it'll · 2. will · 3. gonna · 4. upload · 5. in use · 6. inverter · 7. priority · 8. She submitted it on Thursday — Thursday is a finished time, and the present perfect cannot share a sentence with one · 9–12. teacher judgement

Teacher Notes

What changed from Lesson 5, and what deliberately did not. The passage is 504 words against Lesson 5's 481, and that is the point: the length stops climbing here. Lessons 1 to 5 went 185, 244, 320, 400, 481 — about a quarter longer every week, which is faster than anybody consolidates. Lessons 6, 7 and 8 all sit at about 500. Difficulty still rises, but through the grammar step, the density of the vocabulary, and how much of the text is argument rather than story. The question set is untouched: ten questions, the same eight types, in the same order. She should recognise every question on sight and spend all of her attention on the text.

The one real difficulty. Not the forms — will and going to are both easy to build — but choosing between them. Arabic marks the future with one particle and does not split it this way, so the instinct is to use whichever came first in the textbook. The rule that actually works is in 3.4: the list is going to; the conversation is will. If the decision existed before the sentence began, it is going to. If it was made inside the sentence, or is only an opinion, it is will. Make her say why in 3.6 A: the reason matters more than the answer.

Why the pronunciation part is the one to protect. A student can write will perfectly and never once hear it, because in speech it is a single consonant hung on the end of the pronoun — it'll, she'll, we'll. The same student hears gonna and connects it to nothing she has been taught. Part 05 says it plainly: write going to, say /**ˈgə**nə/. The trap in its third section is worth two extra minutes — I'm going to the college keeps the full sound, because there going is a real verb of movement.

On the "Come back to" section. It takes the present perfect from Lesson 4 and adds the rule held back the first time: it cannot share a sentence with a finished time. I have finished it yesterday is among the most common errors at this level, and it survives for years if nobody names it. The test is mechanical — is the time expression closed? — so she can apply it without thinking once she has seen it once.

Why this story. Five passages have followed one person. This one follows a group, which is what the future tenses need: plans are made by people talking to each other, and will only makes sense when somebody is in the room to decide something in front of you. It also lets the passage be concrete about things she already knows — an inverter, a schedule that changes every month, a queue of downloads —

without being about them. They are competent people with a method, which is both true and exactly what the grammar requires.

Success criteria for Lesson 6. The student should be able to:

- answer L1–L4 correctly on the second hearing;
- hear it'll be ready and we're gonna start and write both out in full;
- choose between will and going to, and say why;
- form the negative and the question of both;
- avoid the present perfect with yesterday, last Tuesday, at six o'clock;
- use 10 of the 14 key words in her own sentence;
- write 14 sentences of plan with fewer than 4 future errors.

If it is too easy: keep the length where it is and raise the density instead — ask for the writing task in 18 sentences, with three will / going to choices justified in the margin. If it is too hard: drop part 05 to recognition only — hear it, do not produce it — and drill 3.4 alone for a second week. Length will not be the problem this time, which is the reason for holding it flat.

A note on spaced recall. `03-vocabulary.mp3` ends with five Lesson 4 words — connection, website, account, password, update. Lesson 5 recalled Lesson 3, so the two-lesson gap holds. Lesson 5's words are due back in Lesson 7.

A note on the games. This is the first lesson with five instead of two: the crossword and the word search as before, plus memory pairs, a criss-cross clued in Arabic, and a cryptogram. All five are generated from the same vocabulary block, so none of them can drill a word the lesson does not teach. The memory game has three settings — icons, meanings, mixed — and its drawings live in `icons.json` at the repository root, shared by every lesson. Lessons 1 to 5 still have two games each; giving them the other three needs drawings for about seventy more words, and that is a separate decision.
